Espresso making just got easier

What is easy espresso professional?

It is a new way to make the preparation of espresso coffee easier just using the capsules on the professional coffee machines.

The capsules are available as monodose (7 gr) and double dose (14 gr) and are single packed in order to protect fragrance and aroma.

The barista behind the machine does not need the grinder anymore. No more problems to wrong grinding, poor dispensing or improper tamping.

This system guarantees the quality of the espresso, avoids waste of coffee and keeps the espresso machine extremely clean.

La Tazza d'oro is able supply the single and double filterholder for all the major brands of professional espresso machines on the market. This special filterholder can be set into the machine without any technical change. The only thing the barista has to do is to replace the filterholders and to start working with the capsules.

Using the double and the single capsule the performance of the coffee machine will not be limited. With a 2-group machine you can prepare four espressos at the same time.

The capsules are available with different blends, also decaffeinated, so the barista can offer his clients a selection without having several grinders and the risk that the coffee beans in the hopper get old.

And the environment?

La Tazza d'oro is offering biodegradable capsules, an environmentally friendly solution.

The advantages:

1. **Easy to use**
2. **No grinder required**
3. **Constant espresso quality**
4. **Multiple blends available**
5. **Always fresh coffee**
6. **Clean and fast**
7. **Less maintenance on machines**
